

ark Auto Proximity Box

Block the signal from a smart key

The **ark Auto Proximity Box** is engineered to block the signals emitted from smart vehicle keys, ensuring that stored keys are safe when inside the ark Auto key safe.

Constructed from lightweight, durable aluminium, the Proximity Box acts as a faraday enclosure, effectively shielding smart keys and preventing wireless communication with the vehicle.

- **Spacious interior:** Fits all known car keys*
- **Highly secure:** Blocks the vehicle entry signal when combined with the key safe
- **Lightweight yet strong:** Made from durable aluminium
- **Simple operation:** Easy to open and close
- **Immediate use:** tool-free installation
- **Seamless compatibility:** Fits in both ark Auto Over the Window and Permanent Mount key safes.

Guidelines

We recommend using our automotive products in secure facilities with security perimeter fencing, secure entry and exit points. Smart key technology and signal strength can vary from year to year. Always test the proximity box inside the key safe with your smart keys before use. It has been designed to work in conjunction with key safe.

*keys assessed as per October 2025
